#### Healthcare Facility ( Hospital ) Legionella Control and Prevention using the Multi-Patented AquaLyse® Copper Silver Ionisation Water Treatment.

Healthcare facilities are among the most at risk when dealing with *Legionella bacteria*, cause of Legionellosis "Legionnaires' disease".

Many international and national organisations acknowledge copper silver ionisation as an effective and safe technology for the prevention and control of Legionella bacteria in domestic water distribution networks.

AquaLyse® Copper Silver Ionisation water treatment systems are the most advanced on the market today. These automated Legionella Control and Prevention water treatment units are engineered for healthcare ( hospitals ) with domestic water distribution networks of all sizes.

AquaLyse® water treatment technology operate in all water temperatures and are ideal for both domestic hot and cold water distribution networks.

Call us today at 1-800-314-3007 and make **AquaLyse®** part of your long term Legionella control and prevention strategy.
