Hotel and Resort Water Treatment

© ProCare Water Treatment Inc.

Hotel and Resort "Green" Potable Water Treatment Technology:

Multi-patented AquaLyse® "Cascading" Copper Silver Ionisation for total secondary water treatment within all potable water distribution networks.

With over 50 different models to choose from, the AquaLyse® units can treat from 25M3 to over 4000M3 per day of new incoming potable domestic water.

When considering the hotel and resort industry, a Legionella bacterial outbreak within a potable water distribution system can result in immediate drop of occupancy, be long lasting and financially devastating to a hotel or resort facility.

Facility engineers and operators can now easily take a pro-active approach to this real yet preventable secondary water treatment health issue.

Reliable, affordable and easy to install, the AquaLyse® potable water treatment technology can be retro fitted into any hotel or resort potable water distribution system.

Hotel facility engineers and consultant engineering firms who need additional information on our AquaLyse® technology should contact ProCare Water Treatment Inc. for a proper site evaluation.

AquaLyse® is a multi-patented water treatment technology engineered for hotels and resorts that require secondary "chemical free" water treatment within their potable water distribution networks.
